

Lexis® Visualfiles™ and tmconvey search integration

Streamline search processes with a two-way information flow - Taking manual work out of the conveyancing process increases speed and efficiency while reducing cost - helping you improve margins and keep customers happy in a competitive market.

Integrating Visualfiles with tmconvey supports you by streamlining the search request process.

Automation for convenience and efficiency

Our integration module enables the intelligent exchange of information between Visualfiles and tmconvey, and automates key parts of the search request process. You no longer have to create a case in tmconvey, or check for completion of the searches you request, and then manually attach the search outputs to the case history in Visualfiles.

Instead, a simple click on the new Property Searches button in the Visualfiles case history takes you directly to the tmconvey application. Once you log in, a new case is created automatically in tmconvey, with the property address autofilled from the Visualfiles case history - ready for you to request the required searches.

As each search completes, Visualfiles automatically uploads the documents to the relevant case history (with a full audit trail) and notifies you that they're available for review.

Ready to use in a day

The tmconvey integration module includes one day's configuration effort from a Visualfiles expert. We'll install the module for you and make sure you know how to use it.

If you've deployed the Visualfiles Conveyancing Accelerator, the tmconvey integration module will be ready to use as soon as it's installed. If you've built your own conveyancing process in Visualfiles, we'll show you how to slot the module into your own workflow.
